MONTHLY NEWSLETTER- FEBRUARY 2016

SHADOW OR NO SHADOW?

Even though I love winter activities like skiing and snowmobiling- I'm hoping Punxsutawney Phil does not see his shadow this year- I'm ready for spring! Which do you prefer?

SNOW REMOVAL

In an effort to provide the best possible snow removal service to your complex remember the following:

1. Pay special attention to the designated snow pile areas. These areas must be left accessible from the time the first flake of snow falls until the final cleanup is complete.
2. Snow will be removed from the sidewalks after the snow has stopped falling and/or there is an accumulation of more than one inch
 - Make sure when parking your vehicle it does not hang over the sidewalk, this will interrupt the snow removal and cause delays.
3. The parking lots and driveways will be cleared after the snow has stopped falling and/or there is an accumulation of more than four inches.

Please trust us to do the best we can. The fewer interruptions we have, the faster we can take care of things. If there is something we have missed, please give us a call at 605-394-3310, but remember that when you are snowed in, our staff may also be snowed in. Your cooperation will make things better for everyone. **Please note that in hazardous weather conditions or if the walkways and parking lots are not cleared, use caution when leaving your apartment**

Hope you are having a wonderful month! Please let me know if there is anything I can do for you!

FOUNDERS PARK VILLAGE

MONTHLY NEWSLETTER- FEBRUARY 2016

The following information was provided by the I-190/Silver Street Interchange Project Newsletter published January 2016.

LATE JANUARY 2016

Because the area beneath the existing bridge is accessible, foundation work will continue on the north bridge abutment. Work will continue on the retention basin which will serve to treat stormwater that runs off the interchange area and from the upstream drainage basin.

EARLY FEBRUARY

Work on the Mechanically Stabilized Earth (MSE) retaining wall will continue on the south side, and will begin on the north side adjacent to the future bridge location. Work on underground utilities (storm sewer, sanitary sewer, and water) will begin.

LATE FEBRUARY

Work on the Mechanically Stabilized Earth (MSE) retaining wall is anticipated be complete. Work will continue on underground utilities.

A Mechanically Stabilized Wall on the south bridge abutment is being installed. At it's tallest point, this wall is approximately 25 feet high. A similar wall is being constructed on the north side.

Did you know.....there's a time lapse video of the construction efforts that can be viewed on the project website?
